

MIGA Protocol

Make Iran Great Again

*An Experimental Operating System for
Rebuilding a Nation & Building Community*

Whitepaper v1.0
January 2026

"I am Cyrus, king of the world... I gathered all their peoples and restored them to their homelands."

— The Cyrus Cylinder, 539 BCE

Protocol Manifest

*We build public goods with public receipts.
We protect people with private participation.
We constrain power with code and time.
We fund programs with transparent flows.
We measure integrity continuously.
We are Persian in heritage, universal in dignity.*

Join the MIGA Network.

1 The Cyrus Legacy: From Empire to Exile

1.1 The First Declaration of Human Rights (539 BCE)

Twenty-five centuries ago, Cyrus the Great conquered Babylon not with destruction, but with liberation. The Cyrus Cylinder—now housed in the British Museum—records the first declaration of human rights in human history:

“I freed the people from their chains. I restored their temples. I returned their gods. I gathered all their peoples and restored them to their homelands.”

This was not mere propaganda. Cyrus established an empire built on **pluralism**—many peoples, many faiths, one system of law. Satrapies governed themselves within bounds. Diversity was structural, not merely tolerated.

1.2 From Cyrus to the Present: The Long Arc

| Era | Period | Contribution |
|--------------------|----------------|---|
| Achaemenid | 550–330 BCE | First human rights, pluralistic empire |
| Parthian | 247 BCE–224 CE | Decentralized federation model |
| Sassanid | 224–651 CE | Zoroastrian renaissance, legal codification |
| Islamic Golden Age | 750–1258 CE | Persian scholars preserve & advance knowledge |
| Safavid | 1501–1736 | Cultural renaissance, architectural marvels |
| Qajar | 1789–1925 | Constitutional movement begins |
| Pahlavi | 1925–1979 | Modernization, then revolution |
| Islamic Republic | 1979–present | Diaspora grows to 8+ million |

1.3 The Constitutional Revolution (1905–1911)

Iran's Constitutional Revolution was the first of its kind in Asia—a movement for representative government, rule of law, and limits on arbitrary power. Though ultimately crushed, it planted seeds that still grow.

The revolutionaries understood: **power must be constrained by structure, not just goodwill.**

1.4 1953: The Coup That Changed Everything

Operation Ajax. The CIA and MI6 overthrew Prime Minister Mohammad Mosaddegh—Iran's democratically elected leader—to restore the Shah and protect oil interests.

The consequences echo still:

- Trust in Western democracy: shattered
- Path to 1979 revolution: opened
- 8+ million Iranians now in diaspora
- A civilization scattered across 85+ countries

1.5 The Diaspora: A Nation Without Borders

Today, the Persian diaspora represents:

- **8+ million** people across 40+ countries
- **Highly skilled:** engineers, doctors, entrepreneurs, artists
- **Capital-connected:** significant economic influence
- **Culturally cohesive:** shared language, history, identity
- **Yet fragmented:** no coordination infrastructure

We are not stateless. We are the state-in-exile.

2 The MIGA Vision: Experimental OS for Rebuilding

2.1 What We Are Building

MIGA is not another DAO. MIGA is a **Civic Operating System**—a programmable commons that can:

1. **Start as infrastructure:** Coordination tools for diaspora
2. **Scale toward state-like functions:** Treasury, governance, services
3. **Avoid old failure modes:** No centralization, no capture, no corruption
4. **Prepare for return:** When borders open, we bring home institutions

The Core Innovation

Separating **political governance** (one token: PARS) from **capital allocation** (ten DAO program tokens) enables specialized funding programs without fragmenting governance.

2.2 From NGO to Nation-Scale

| Phase | Period | Capability |
|--------------|-----------|---|
| Foundation | 2026–2027 | NGO structure, core contracts, 3 DAOs |
| Civic OS | 2027–2028 | All 10 DAOs, privacy layer, 10K+ members |
| Scale | 2028–2030 | 40+ countries, 100K+ members, \$100M+ TVL |
| Nation-Ready | 2030+ | Full civic services, multi-generational endowment |

2.3 Design Principles

1. **Consent** — Governance derives from opt-in participation
2. **Constraint** — Authority limited by code: bounded parameters, timelocks
3. **Transparency** — Public execution and receipt standards
4. **Safety** — Private voting and shielded disbursements protect humans
5. **Neutrality** — Anti-capture: outlasts personalities and factions
6. **Pluralism** — Multiple communities under common rules

3 Token Architecture: Multi-Chain Native

3.1 Seven Blockchains, One Token

MIGA token is native to Solana with bridges to six additional chains:

| Chain | Standard | Bridge | Purpose |
|----------|-----------|--------------|----------------------------------|
| Solana | SPL Token | Native | Primary chain, bonding curve |
| Ethereum | ERC-20 | Wormhole | DeFi integrations, DAO contracts |
| Base | ERC-20 | Wormhole | Low-cost transactions |
| Arbitrum | ERC-20 | Wormhole | L2 scaling |
| Polygon | ERC-20 | Wormhole | Mass adoption |
| Lux | ERC-20 | Lux Bridge | Privacy features |
| Bitcoin | Runes | Zeus Network | Store of value |

3.2 Tokenomics

| Allocation | Amount |
|-------------------------|--------------------|
| Total Supply | 1,000,000,000 MIGA |
| Meteora DLMM LP | 100,000,000 (10%) |
| One-Sided Bonding Curve | 400,000,000 (40%) |
| Treasury (DAO-governed) | 500,000,000 (50%) |

Important: There is no team allocation, no advisor tokens, no VC rounds. The team participates like everyone else.

3.3 Bonding Curve Mechanics

The bonding curve provides fair price discovery:

- **Start Price:** 0.0000001 SOL per token
- **End Price:** 0.00001 SOL per token (100x increase)
- **Curve:** Linear progression based on tokens sold
- **Slippage Protection:** Minimum tokens out parameter

$$\text{Price} = \text{StartPrice} + \frac{\text{TokensSold}}{\text{TotalSupply}} \times (\text{EndPrice} - \text{StartPrice}) \quad (1)$$

3.4 Governance Token Architecture

| Token | Type | Purpose |
|--------|-------------|--|
| MIGA | Collateral | Alignment—stake what you cannot afford to lose |
| PARS | Emission | Coordination—flows to builders, decays when idle |
| sPARS | Rebasing | Multiplied rewards for continuous participation |
| vePARS | Vote-Escrow | Governance power—lock PARS + MIGA together |

3.5 Governance Power Formula

$$\text{vePARS} = \min(\text{PARS}, \text{MIGA}) \times \sqrt{\frac{\text{lock_duration}}{\text{max_duration}}} \quad (2)$$

This enforces:

- **Balance:** Need both tokens—whales without MIGA cannot dominate
- **Commitment:** Longer locks earn more power
- **Diminishing Returns:** Square root prevents capture

4 The Ten DAOs: Specialized Pillars

4.1 DAO Structure

The DAO layer operates on EVM (Ethereum/Lux) while the token remains native on Solana:

| # | Symbol | Persian | Domain | Strategy |
|----|--------|----------------------|----------------|-------------------------|
| 1 | AMN | Amniyat (Security) | Security | Stablecoin-only, audits |
| 2 | KHAZ | Khazaneh (Treasury) | Treasury | Diversified reserves |
| 3 | DAD | Dad (Justice) | Governance | Minimal, tooling |
| 4 | SAL | Salamat (Health) | Health | Stablecoin + yield |
| 5 | FARH | Farhang (Culture) | Culture | Creator grants |
| 6 | DAN | Danesh (Knowledge) | Research | Research grants |
| 7 | SAZ | Sazandegi (Building) | Infrastructure | Procurement |
| 8 | PAY | Payam (Message) | Consular | Coordination |
| 9 | WAQF | Waqf (Endowment) | Endowment | Long-horizon venture |
| 10 | MIZ | Mizan (Balance) | Integrity | Impact audits |

4.2 Fee Allocation

| DAO | Allocation |
|----------------------|------------|
| KHAZ (Treasury) | 25% |
| WAQF (Endowment) | 15% |
| SAL (Health) | 10% |
| DAN (Research) | 10% |
| SAZ (Infrastructure) | 10% |
| FARH (Culture) | 7% |
| AMN (Security) | 5% |
| DAD (Governance) | 5% |
| MIZ (Integrity) | 5% |
| PAY (Consular) | 3% |
| Emergency Reserve | 5% |

4.3 DAO Token Architecture (ERC-4626)

Each DAO operates on EVM with:

- **DaoVault**: ERC-4626 vault holding assets
- **DaoShare**: DAO token = shares in vault
- **BondDepository**: Discounted entry with vesting

5 Cross-Chain Bridge Architecture

5.1 Wormhole Integration

Primary bridge protocol for Solana to EVM chains:

```
Solana (SPL) --> Wormhole --> Ethereum (wMIGA)
                         --> Base (wMIGA)
                         --> Arbitrum (wMIGA)
                         --> Polygon (wMIGA)
```

5.2 Lux Bridge

For Ethereum to Lux (privacy features):

```
Ethereum --> Lux Bridge --> Lux (wMIGA)
```

5.3 Bitcoin Integration (Planned)

Via Zeus Network for Runes/BRC-20:

```
Bitcoin (Runes) <--> Zeus Network <--> Solana (SPL)
```

6 Community Chapters

A Chapter is a gauge. It represents a community—physical or virtual—that serves the diaspora.

6.1 Chapter Types

- **City Chapters:** Los Angeles, Toronto, London, Berlin, Sydney, Dubai
- **University Chapters:** Stanford, MIT, Oxford, Toronto, TUM
- **Guild Chapters:** Developers, Artists, Researchers, Entrepreneurs

6.2 Launching a Chapter

1. Gather 10 founding members with vePARS
2. Submit proposal to governance
3. Pass with 51% approval
4. Receive initial budget, begin operations

Chapters earn PARS emissions proportional to their votes. They report quarterly.

7 Privacy & Security

7.1 Multi-Chain Privacy Stack

| Chain | Function |
|---------------|--------------------------------------|
| C-Chain (Lux) | Public governance, receipts |
| T-Chain (Lux) | Private voting (TFHE), threshold ops |
| Z-Chain (Lux) | Shielded treasury |
| Q-Chain (Lux) | Post-quantum communications |

7.2 What Is Public vs. Private

| Public | Private |
|----------------------------|------------------------|
| Outcomes, receipts, totals | Individual votes |
| Rules, audit trails | Beneficiary identities |
| Treasury balances | Operator keys |

7.3 Post-Quantum Security

Hybrid cryptography during transition:

- **Key Exchange:** X25519 + ML-KEM-768
- **Signatures:** Ed25519 + ML-DSA-65
- **Communication:** AES-256-GCM + ML-KEM hybrid

8 Roadmap

8.1 Phase 1: Foundation (2026–2027)

- Legal entity establishment
- Core contract deployment (Solana + EVM)

- 3 priority DAOs (KHAZ, AMN, MIZ)
- Wormhole bridge integration
- \$5M+ initial funding
- 1,000+ token holders

8.2 Phase 2: Civic OS (2027–2028)

- All 10 DAOs operational
- Privacy layer live (TFHE, shielded rail)
- 7-chain deployment complete
- 10+ strategic partners
- 10K+ token holders

8.3 Phase 3: Scale (2028–2030)

- 40+ countries with programs
- 100K+ members
- \$100M+ TVL
- Institutional partnerships
- Self-sustaining operations

8.4 Phase 4: Nation-Scale (2030+)

- Full civic service capabilities
- Fully decentralized governance
- Multi-generational endowment
- Ready for return

9 Conclusion

MIGA is not about nostalgia. It is about building what tyrants cannot burn.

We trace our lineage to Cyrus, to Darius, to Ferdowsi, to Rumi, to Hafez, to Mossadegh, to the millions who marched and the millions more who fled.

We are not waiting for liberation. We are building the institutions we need—now, in code, beyond their reach.

The empire fell. The people scattered. The code endures.

One day, we go home.
